

MEDICALLY COMPLEX PROGRAMS

Woodridge Nursing and Rehabilitation offers Medically Complex Programs that include rounding Physicians and Therapists who provide clinical services to meet the need of Patients requiring the following:

Wound Care

Effective Wound Care is a complex process and our Physician led team at Woodridge uses a comprehensive approach that addresses nutrition, wound site care with treatments, medication, and general physical conditioning. Each of these elements promote wound healing and infection prevention.

Our Patient's recovery and comfort is of utmost importance. We use a variety of methods to manage pain, treat infection, and use topical agents and compression therapy to help the healing process so the Patient can be back to feeling like themselves sooner.

Intravenous Therapy

Our staff is skilled at providing intravenous antibiotic, hydration, and pain therapy. This allows Patients to leave the hospital earlier and receive any necessary remaining IV therapy here at Woodridge. As a result, our Patients experience fewer hospital stays and we are able to prevent hospital bounce-backs. We also have the ability to do Picc Line insertion in house. Overall, our Patients experience better continuity of care, and enhanced quality of life.

TPN (Trans Parenteral Nutrition) and Clinimix

Trans Parenteral Nutrition (TPN) and Clinimix are provided under the direct supervision of our facility Dietician and Pharmacy Consultant. We administer feeding solutions in accordance with each patient's nutritional and medical needs.

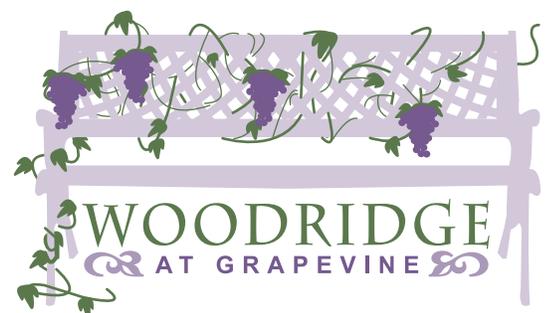

Tracheostomy Care

Our staff is trained in the care of Tracheostomy. This includes daily trach care, suctioning, and monitoring of O2 saturations. We also offer therapy to assist Patients in regaining speech and nutritional intake with a rounding Respiratory Therapist to monitor and improve lung function and tolerance.
